SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and CC osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in CC infections of bone, joints and the central nervous system, however it is constitutions of bone, joints and the central nervous system, however it is constitutions of bone, joints and the central nervous system, however it is constitutions of the inflammatory lesions associated with acne constitution and the presence or absence of P. acnes in a constitution and determining the amount of bound protein the proteins of the invention and determining the amount of bound protein the proteins of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as consymelinked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAU67430-AAU67444 and AAU68011-AAU68015. Note: The sequence data for this patent did not form part of the printed conscription of the printed constitution of the printed conscription of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Propionibacterium acnes immunogenic polypeptides. The associated DNA sequences are used in the treatment, diagnosis of medical conditions caused by P. acnes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequences AAS59506-AAS59804 represent DNA molecules encorpionibacterium acnes immunogenic polypeptides.                                                                                                                                                       'Protein name confidence' is used to rate our confidence accuracy of the protein name.

Class 1: Function experimentally demonstrated in P. a Class 2: Function of highly similar gene experimental demonstrated in another organism (and gene cont in terms of pathways its involved in, if known)

Class 3: Function proposed based on presence of conse acid motif, structural feature or limited seque to an experimentally studied gene.

Class 4: Homologs of previously reported seque or no similarity to any previously reported sequenations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2 (bases 1 to 10348)

                                                                                                                                                                                                                                                                                                                                                                           This represents the February 3, 2003 version of the continually updated, reviewed, Pseudomonas aeruginosa PAO1 genome annotation, from PseudoCAP (see http://www.pseudomonas.com for latest updates and links to alternate annotations). PseudoCAP is coordinated by Fiona S.L. Brinkman (Simon Fraser University, Canada) and Robert E.W. Hancock (University of British Columbia, Canada). We welcome submission through www.pseudomonas.com of any proposed changes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This represents the February 3, 2003 version of the continually updated, reviewed, Pseudomonas aeruginosa PAO1 genome annotation, from PseudoCAP (see http://www.pseudomonas.com for latest updates and links to alternate annotations). PseudoCAP is coordinated by Fiona S.L. Brinkman (Simon Fraser University, Canada) and Robert E.W. Hancock (University of British Columbia, Canada). We welcome submission through www.pseudomonas.com of any proposed changes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pseudomonas aeruginosa Community Annotation Project (PseudoCAP) Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                   'Protein name confidence' is used to race our construction accuracy of the protein name.

Class 1: Function experimentally demonstrated in P. aeruginosa.

Class 2: Function of highly similar gene experimentally
demonstrated in another organism (and gene context consistent
in terms of pathways its involved in, if known).

Class 3: Function proposed based on presence of conserved amino
acid motif, structural feature or limited sequence similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             10984043
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (bases
                                                                                                                                                                                                                                                                                                                                                                                        to an experimentally studied gene.
4: Homologs of previously reported genes of unknown function, or no similarity to any previously reported sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AE004091

This BAC clone was sequenced to phase II by the National Research Centre on Plant Biotechnology, Indian Agricultural Research Institute, New Delhi and was completed to phase III by the Cold Spring Harbor Laboratory Genome Center under the Indo-US collaboration. Clone OSJNBa0041J17 overlaps clone OSJNBa0007D07 from base 100381 to base 148829. The overlap is from base 1 to base 48448 on OSJNBa0007D07.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. This BAC clone was sequenced to phase II by the National Research Centre on Plant Biotechnology, Indian Agricultural Research Institute, New Delhi and was completed to phase III by the Cold Spring Harbor Laboratory Genome Center under the Indo-US collaboration. Clone OSJNBa0007117 overlaps clone OSJNBa0007D07 from base 100381 to base 148829. The overlap is from base 1 to base 48448 on OSJNBa0007D07.
